TESTING STANDARDS

The measurement should be executed in a stable, windless and dark room 60min after lighting the back light at the given temperature for stabilization of the back light. This should be measured in the center of screen. Environment condition: $T_a = 25 \pm 2 \text{ }^\circ\text{C}$.

Definition of Test Points:

Note (1) Definition of Contrast Ratio (C/R):

Ratio of gray max (Gmax) & gray min (Gmin) at the center point (5) the panel

$$\frac{C}{R} = \frac{G_{max}}{G_{min}}$$

Gmax: Luminance with all pixels white

Gmin: Luminance with all pixels black

Note (2) Definition of Response Time: $T_R + T_F$

Note (3) Definition of 9 points brightness uniformity:

$$B_{uni} = 100 * \frac{(B_{max} - B_{min})}{B_{max}}$$

(Test pattern: Full White)

B_{max} : Maximum brightness

B_{min} : Minimum brightness

Note (4) Definition of Luminance of White:

Luminance of white at center point 5

Note (5) Definition of White Color Chromaticity:

Color coordinates of White at center point 5

Note (6) Definition of Viewing Angle

Viewing angle range ($C/R > 10$)
