Lift Access Control by 2N
Creating the future of letting people in and up

Managing access to individual floors is part of a complete access control system. You can now offer this in your projects, limiting people's access to only the floors they live or work on.
Open access can be granted to common floors all the time or according to a schedule. Choose from any of our supported access technologies. Complete your building security by incorporating our Lift Access Control solution.

Access to selected floors only

Various identification options

Suitable for up to 40 floors

Solved visitors' access

Take control over letting people up

With Lift Access Control by 2N, you can include vertical access, via the lift, in your access control solution.
Manage people's access through doors and to floors, all from a single, simple interface.
Ensure secure and convenient access for residents, employees and visitors.

Lift Access Control for residents or employees

The solution starts with a 2N Access Unit or selected IP intercom located in the lift cabin. Users identify themselves using an RFID card, fingerprint, PIN code or Bluetooth technology in their mobile phone. Lift comes automatically to the ground floor after user's authentication on the 2N IP intercom at the entrance.

Lift Access Control for visitors

This solution starts with the 2N Intercom at the entrance to the building. Visitors call to reception or directly to the resident they want to visit. To answer the call, 2N indoor unit, 3rd party IP phone or our 2N® Mobile Video app can be used. Meanwhile in the lift, the button corresponding to the resident's floor is unlocked, so the visitor can select only this floor.

A scalable and easy to manage solution

Use a selected 2N IP intercom or any 2N Access Unit in the lift. Pair it with an Axis A9188 relay module (9160501). Each module controls up to 8 floors and up to 5 modules may be paired per lift.

Control both horizontal and vertical access throughout the building, all through 2N® Access Commander. Alternatively, integrate our Lift Access Control with your own system via MY2N cloud using 2N® Partner API.
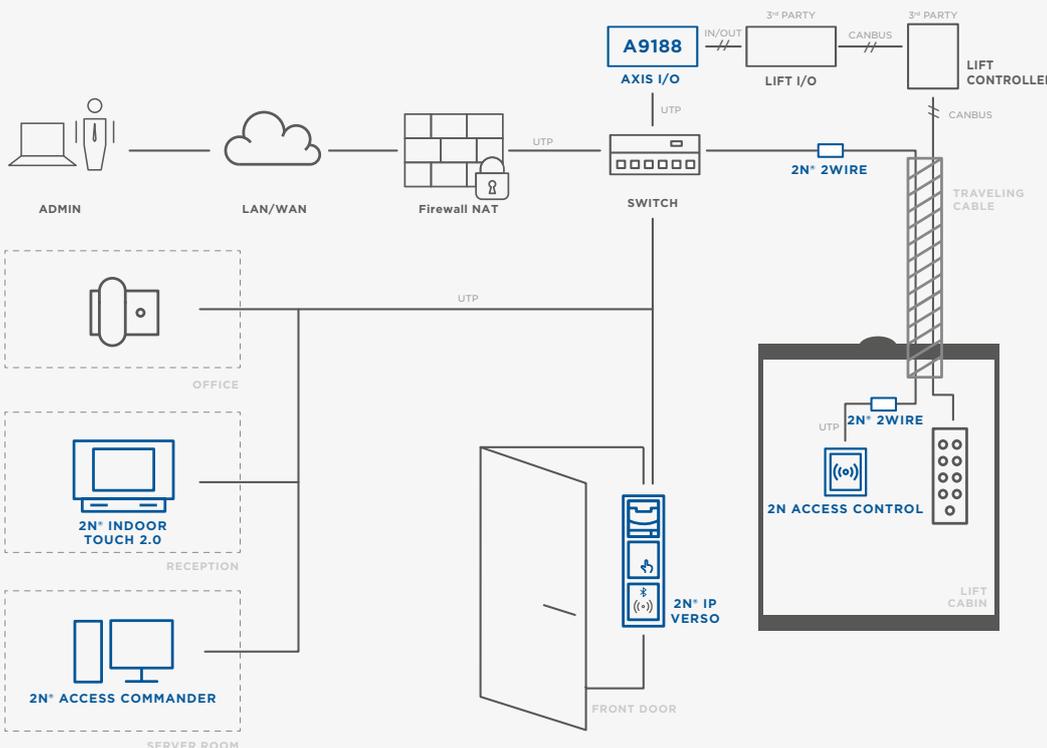

A special license is required for correct functionality. License for 2N IP Intercoms (9137916) or 2N Access Unit (9160401). This license is not included in the Gold License.
