# SC-IPC0708H

8-ch 'Ethernet + Power' over one coax with Built-in Switch Hub SC-IPC0708H, which consists of 8 of SC-IPT07P (1CH Transmitter) and one of SC-IPR0708H (8CH Receiver), transmits Ethernet data and power over only one coaxial cable per channel. Our solution is very cost-effective by minimizing construction period and cost as you can replace your old coaxial system to network by keeping your coaxial cable without any separate power lines unlike the typical network systems used with UTP cables only.
